DIVISION OF OIL
GAS & MINING

UPON REVIEWING THE REPORT PREPARED BY NATIVE PLANT INC. WE FIND THAT A GOOD QUALITY OF TOP SOIL EXISTS TO THE SOUTH OF THE LARGE TAILINGS PILE, WHICH CAN BE EXCAVATED TO A DEPTH OF FOUR FEET FOR USE IN COVERING THE NEUTRALIZED TAILINGS.

THE COMPANY PLANS ON RETAINING NATIVE PLANT INC. TO PROVIDE ON SITE MANAGEMENT FOR MONITORING THE DEPTH OF TOP SOIL REMOVED FROM THE SAGEBRUSH SITE SOUTH OF THE TAILINGS PILE IN WHICH N.P.I. DID VEGETATION AND SOIL ANALYSIS.

NATIVE PLANT INC. HAS INDICATED THAT SIX TO TWELVE INCHES OF SOIL REMOVED FROM FIGURE 2 (SAGEBRUSH SITE, SEE EXHIBIT) WILL BE ADEQUATE TO COVER DISTURBED AREA. THE VOLUME OF TOP SOIL REMOVED WILL BE AROUND TWELVE THOUSAND CUBIC YARDS. TOP SOIL EXCAVATED FROM THE SAGEBRUSH AREA WILL BE PLACED ON GRADE SLOPES ACCORDING TO PROFILES SUBMITTED TO YOU.

THANK YOU,

DOUGLAS K. LEE
